

CCUV TECHNOLOGY

CCUV renovation system consists of:

Dolly with 2 boxes, 4 UV packer units (2 x 60 cm and 2 x 120 cm long), silent compressor, reel for 25 m supply line including sliding air supply and control unit

CCUV-TECHNOLOGY

UV SHORT-LINER RENOVATION

THE FUTURE OF SHORT-LINER RENOVATION WITH UV IS HERE

This evolution is a revolution

1. The latest-generation CUV technology from PRO-KANAL offers plenty of potential and many benefits. This technology enables the **shrink-free** installation of UP and VE resins with a curing time of 10-15 minutes.
2. This technology minimizes the risk of error, lowers costs and is easy on the nerves, since the factory-soaked renovation pad reacts only after switching on the UV cold light LEDs.

The almost noiseless compressor, the reel with 25 m supply line, (including tube chamber, air and power supply) and the control box round off the complete system (pressure and current monitoring).

Please note:

Our range of UV packers and UP/VE pads is specifically designed for each other. We offer the renovation pads in the dimensions DN 80, 100, 125 and 150 in lengths of 50 cm and 100 cm.

The UV cold light LEDs have a lifespan of over 20,000 hours. The power consumption is about 24 watt per meter.

PRO-KANAL WORKSHOP

Our workshops not only provide you with training, but also offer many new tips and tricks. This makes the renovation process easier, faster and better. For information on workshop dates, give us a call or check our homepage.

ingeniously simple - simply ingenious
