

MAIN PIPE TO

THE DIRECT WAY

THE RENOVATION OF CONNECTING LINES FROM THE NON-ACCESSIBLE MAIN CHANNEL DOES NOT GET ANY BETTER

With the **MAIN PIPE TO** system, PRO-KANAL has created a simple, reliable in-house unit that not only does not require robots and additional heating, but also sets new standards for the lowest price (under € 50,000).

Moreover, **MAIN PIPE TO** ensures far better quality for the inliner thanks to the easy handling and low-pressure inversion.

The patented installation method ensures the best quality, even in U-bends. Since both ends of the liner remain open in the **MAIN PIPE TO SYSTEM**, the sewer pipe is free after recovering the inversion unit - everyday operation continues without interruption!

BENEFITS OF MAIN PIPE TO:

Simple, mechanical installation

No large appliances like trucks, camera or robot cars needed

Curing of your choice (e.g. epoxy 3 hours) or CUV 20 minutes

Almost all Flexliners can be used

The main sewer usually remains in operation

Liner length depends on the client

All connection pipes can be lined from the main sewer above DN 250

Can cut working hours and costs in half

Economically efficient solution for municipalities

ingeniously simple - simply ingenious
