

NAVIGATION SYSTEM

ORDER NUMBER
ZH-000-0012

The set consists of 3 different balls for optimal use with different pipe dimensions and damaged areas.

NAVIGATION SYSTEM

FOR MASTER PACKERS AND MASTER
U-BEND RENOVATION PACKERS

In many situations, pushing renovation packers is not easy – for example, due to several bends in a row, sleeve misalignment and other damage to sewer lines. This is where the patented NAVIGATION SYSTEM comes into use.

Attached to the packer's head, the clever NAVIGATION SYSTEM guides you to the damaged spot, even in extreme situations.

There are three different ball sizes available for various types of damage and pipe diameters.

The combination of flexible rod and ball also make it possible to turn the renovation packer into inlets!

ingeniously simple - simply ingenious
